Material Safety Data Sheet

MSDS005 - Transportation

Date of Issue: 10 Feb. 2011

Rev. 02 Report No# tc-test-0110

1. Product and Company Identification

[Product]

1.1 Product Name: Lithium Polymer Rechargeable Battery Séries LPA - LPB - LPC - LPD

1.2 System: Lithium Polymer Rechargeable Battery

[Company]

1.3 Company Name: Ciblenergie

1.4 Company Address: 960, Avenue Vidier

84270 Vedene FRANCE

1.5 Emergency Telephone Number: 886-2-8227 8799

2. Composition Information on Components

CAS#	<u>Components</u> <u>Approximate Perc</u>	ent of Total Weight	EINECS#
91728-14-2	Aluminum	2-10%	231-072-3
91728-14-2	Aluminum (Various Forms)	5-15%	231-072-3
82600-58-8	Carbon (Various Forms)	10-25%	231-153-3
7440-50-8	Copper	5-15%	231-159-6
	Lithium Iron Phosphate	30-40%	
7790-69-4	Lithium Salts	1-5%	224-772-5
7440-02-0	Nickel	0.5-5%	231-111-4
102-09-0	Organic Carbonate	10-25%	203-005-8
9002-88-4	Polymer	3-10%	201-622-7

The materials contained in the battery may only become a hazard if the battery or the cell is disintegrated or if the battery is physically or electrically abused.

3. Physical and Chemical Properties

3.1 Physical:

The Lithium Polymer Rechargeable Battery described in this Material Safety Data Sheet are sealed units which are not hazardous when used according to the recommendations of the manufacturer. Under normal conditions of use, the solid electrode materials and Gel electrolyte they contain are non-reactive provided the battery integrity is maintained and seals remain intact.

3.2 Chemical:

Classification of dangerous substances contained into the product as per directive 67/548/EEC

Substance		Melting	Boiling	Classification			
		point	point				
CAS №	Chemical			Exposure	Indication	Special	Safety
	symbol			limit	of danger	risk (1)	advices (2)
12190-79-3	LiCoO2	> 1000°C	N/A	0.1 mg/m3		R22	S2 S22
				OSHA		R43	S24 S26
							S36 S37
							S43 S45
							l .

EC:	Organic	EC:38°C	EC:	None	Flammable	R21	S2 S24
96-49-1	solvents	DMC: 4°C	243°C	established		R22	S26 S36
DMC:	(EC-DMC	DEC: -43°C	DMC:	OSHA		R41	S37 S45
616-38-6	DEC)		90°C			R42/43

						R43	

1 – Nature of special risks:

- R 14 Reacts with water.
- R 21 Harmful in contact with skin.
- R 22 Harmful if swallowed.
- R 41 Risk of serious damage to the eye.
- R 42/43 May cause sensitization by inhalation and skin contact.
- R 43 May cause sensitization by skin contact.

2 – Safety advices:

- S 2 Keep out of reach from children.
- S 8 Keep away from moisture.
- S 22 Do not breathe dust.
- S 24 Avoid contact with skin.
- S 26 In case of contact with eyes, rinse immediately with plenty of water and seek medical attention.
- S 36 Wear suitable protective clothing.
- S 37 Wear suitable gloves.
- S 45 In case of incident, seek medical attention.
- R 42/43 May cause sensitization by inhalation and skin contact.
- R 43 May cause sensitization by skin contact.

4. Emergency and First Aid Information

In case of contacting the materials from a damaged or ruptured cell or battery:

Eye contact: Washing immediately with plenty of water and soap or for at least 15 minutes. Get medical attention.

Skin Contact: Washing immediately with water and soap.

Inhalation of Vented Gas: Remove to fresh air. Get medical attention.

Ingestion: Get medical attention immediately.

MSDS005 Ciblénergie LPA-D

5. Fire and Explosion Data

Extinguishing Media: Dry chemicals, water.

Fire-Fighting Procedures:

Use self-contained breathing apparatus and protective clothing.

Unusual Fire and Explosion Hazards:

Toxic gases (HF, PF₆) will be formed if cells or battery are involved in a fire. Cells or battery may flame or leak potentially hazardous organic vapors if exposed to excessive heat, fire or over-voltage conditions. Damaged or opened cells or batteries may result in rapid heat and the release of flammable vapors.

6. Accidental release measures

The material contained within the batteries would only be expelled under abusive conditions. Using shovel or broom, cover battery or spilled substances with dry sand or vermiculite, place in approved container (after cooling if necessary) and dispose in accordance with local regulations.

7. Storage and Handling / Use

- **7.1** Do not store batteries in a manner that allow s terminals to short circuit.
- **7.2** Do not place batteries near heating sources, nor exposed to direct sunlight for long periods. Elevated temperatures can result in reduced battery service life.

7.3 Charging Battery

Use only approved chargers and procedures. Improperly charging a cell or battery may cause the cell or battery to flame or damage.

7.4 Battery Disassembly

Never disassemble a battery.

Should a battery unintentionally be crushed, thus releasing its contents, rubber gloves must be used to handle all battery components. Avoid inhalation of any vapors that may be emitted.

7.5 Battery Short Circuit

Do not short-circuit a battery. A short circuit can result in over-heating of the terminals and provide an ignition source.

More than a momentary short circuit will generally reduce the cell or battery service life and can lead to ignition of surrounding materials or materials within the cell or battery if the seal integrity is damaged.

Extended short-circuiting creates high temperature in the cell and at the terminals. Physical contact to high temperatures can cause skin burns. In addition, extended short-circuit may cause the cell or battery to flame.

Avoid reversing cell polarity within a battery assembly. Reversing cell polarity may cause the cell or battery to flame or to emit gases.

7.6 Mixed Batteries and Types

Avoid to use old and new cells or cells of different sizes; different chemistry or types in the same battery assembly.

8. Exposure Controls/Personal Protection

Respiratory protection : Not necessary under normal use. In case of battery rupture, use self-contained full-face respiratory equipment.

Hand protection : *Not necessary under normal use.* Use Viton rubber gloves if handling a leaking or ruptured battery.

Eye protection: Not necessary under normal use. Wear safety goggles or glasses with side shields

if handling a leaking or ruptured battery.

Skin protection : *Not necessary under normal use.* Use rubber apron and protective working in case of handling of a ruptured battery.

9. Cell Properties

9.1 Appearance : (Physical shape and color as supplied) Metal squares, hermetically

sealed and fitted with an external plastic box.

9.2 Temperature range:

Discharge: -20-+60°C **Charging:** -0-+45°C

Storage: -20- + 45°C(for less than 1 month) ;-20- + 35°C(for less than 6 month)

9.3 Mechanical resistance: As defined in relevant IEC standard

9.4 Other: (Note: Wh = Nominal voltage x Rated Ah as defined in IEC standard N° 285. kg =

Average battery weight)

10. Stability and Reactivity

Conditions to avoid : Heat above 70°C or incinerate. Deform, mutilate, crush, pierce, disassemble. Short circuit. Prolonged exposure to humid conditions.

Materials to avoid: N/A.

Hazardous decomposition products : Corrosive/Irritant Hydrogen fluoride (HF) is produced in case of reaction of *lithium hexafluorophosphate(LiPF6)* with water. Combustible vapors and formation of Hydrogen fluoride (HF) and phosphorous oxides during fire.

11. Toxological Information

Rechargeable Li-Ion polymer batteries do not contain toxic materials.

12. Ecological Information

When properly used or disposed Lithium Polymer Rechargeable batteries do not present environmental hazard.

13. Disposal Procedures

Lithium polymer rechargeable battery contains no toxic metals, only naturally occurring trace elements. It is advisable to consult with local authorities as disposal regulations may vary dependent on location.

14. Transportation

Packaging sign, class and method for the batteries in relating to the dangerous goods transportation are not applicable because they are considered to be non-dangerous by the INTERNATIONAL CIVIL AVATION ORGANISATION (ICAO) and the 52nd edition of INTERNATIONAL AIR TRANSPORT ASSOCIATION (IATA). The batteries meet all the requirements of Section II of PI965~PI967, as described by both organizations. UN number, packing instructions and shipping name are UN3480, PI965 and "Lithium ion batteries" respectively under the ICAO Technical Instructions. The batteries are also considered to be non-dangerous by the INTERNATIONAL MARITIME DANGEROURS GOODS regulation (IMDG) code. The battery is secured effectively to prevent short circuit and movement leading to short circuit. The battery is also over packed with strong packaging materials.

15. Regulation information

The transport of Lithium Polymer Rechargeable Battery is regulated by various bodies (IATA, IMO, ADR, US-DOT) that follow the United Nations "Recommendations on the Transport of Dangerous Goods, Model Regulations, 13th Revised edition - 2003 - Ref. ST/SG/AC.10/1 Rev. 13". Depending on their lithium metal equivalent weight content, design, and ability to pass safety tests defined by the UN in the "Recommendations on the Transport of Dangerous Good - Manual of Tests and Criteria Part III, sub-section 38.3 - 3rd Revised edition - 2002 - Ref. ST/SG/AC.10/11 Rev.3 Amendment 1 «Lithium Batteries»", the lithium polymer rechargeable battery packs are not infringing Class-9 regulation, which means it is considered as non-dangerous goods and not restricted for air transportation. Individual lithium polymer rechargeable battery and pack with respectively not more than 20Wh and 100Wh that passes the UN-defined safety tests, is not restricted for air transportation. Battery also fulfills the requirement of Special Provision SP188 under IMDG code.

16. Other Information

The information contained herein is based on the data available to us and believed to be correct. However, Limited makes no warranty, expressed or implied. Users should consider the data only as a supplement to other information gathered by them and must make independent determinations of the suitability and completeness of information from all sources to assure proper use and disposal of these materials and the safety and health of employees and customers.
